

Statement of Endorsement

Statement of Endorsement

We endorse the Infrastructure Carbon Review and agree that the infrastructure sector should pursue lower carbon solutions that also cost less.

We will play our part within the value chain, and therefore commit our organisations to releasing the value of lower carbon through:

Leadership

To create the environment and the imperative for change.

Innovation

To be the engine of change.

Procurement

To provide the mechanisms that enable the supply chain to respond.

We agree that where it can reduce costs to the taxpayer and consumer, Government and industry clients should work together to incorporate carbon reduction objectives within their infrastructure projects and programmes by 2016.
