|----------|---------|----------------------|---|---|--|-----------------------|---|---|
| | | S | L | R | | S | L | R |
| | | | | | <ul style="list-style-type: none"> • Use one of the options below: <ul style="list-style-type: none"> • a combined detergent disinfectant solution at a dilution of 1,000 parts per million available chlorine, or • a household detergent followed by disinfection (1000 ppm available chlorine.). Follow manufacturer's instructions for dilution, application and contact times for all detergents and disinfectants, or • Ensure that you have the COSHH Assessment for the disinfectant that you use. • Any cloths and mop heads used must be disposed of and should be put into waste bags as outlined below. • Personal waste from individuals with symptoms of COVID-19 and waste from cleaning of areas where they have been (including PPE, disposable cloths and used tissues): <ol style="list-style-type: none"> 1. Should be put in a plastic rubbish bag and tied when full 2. The plastic bag should then be placed in a second bin bag and tied 3. This should be put in a suitable and secure place and marked for storage until the individual's test results are known. Do not place in general waste areas until negative test results are known, or the waste has been stored for at least 72 hours. 4. If the individual tests negative, this can be disposed of immediately with the normal waste. <p>If COVID-19 is confirmed this waste should be stored for at least 72 hours before disposal with normal waste</p> | | | |

This document is live and will be revised accordingly to consider new advice issued by the UK Government.

Guidance on Scoring of H, S & E Risks/Aspects

¹Site / Depot / Office specific initial risks should be based on corporate residual risks presented in the company health & safety risk registers (see 621-01). In evaluating site-specific residual risks, scores should only change if controls additional to company controls are implemented. **Residual risk rating should a score of 4 or less where reasonably practicable.**

Safety Risk ratings: Severity x Likelihood

| | | | | |
|----------------|--------------|--------------|------------------|-----------------|
| S = Severity | 1 = Minor | 2 = 3 Day | 3 = Major Injury | 4 = Fatality. |
| L = Likelihood | 1 = Unlikely | 2 = Possible | 3 = Likely | 4 = Very Likely |

Environmental risks/aspects

¹Site / Depot / Office specific initial risks should be based on corporate residual risks presented in the company environmental risk registers (see 621-02) In evaluating site-specific residual risks, scores should only change if controls additional to company controls are implemented.

| Severity | Score | Likelihood | Score |
|---|-----------------|------------|-------|
| Impact could result prosecution? | No = 0, Yes = 1 | Unlikely | 1 |
| Impacts are at least regional rather than remain within or close by the site? | No = 0, Yes = 1 | Possible | 2 |
| Long term duration of impact e.g. more than 3 months? | No = 0, Yes = 1 | Probable | 3 |
| Noticeable damage to our environment will occur? | No = 0, Yes = 1 | Certain | 4 |
| Severity Score (add scores from severity categories) | Max score = 4 | | |
| Total score = Severity x Likelihood | | | |

Appendix A

CORONAVIRUS

How to avoid catching or spreading Coronavirus

DO

Wash your hands with soap and water often - do this for at least 20 seconds.

Always wash your hands when you come into work or get home

Use hand sanitizer gel if soap and water are not available

Cover your mouth and nose with a tissue or your sleeve (not your hands) when you cough or sneeze

Put used tissues in the bin straight away and wash your hands afterwards

Try to avoid close contact with people who are unwell.

DON'T

Touch your eyes, nose or mouth if your hands are not clean.

Guidance from: <https://www.nhs.uk/conditions/coronavirus-covid-19/>

Appendix B

Guidance relating to Self-isolation - Coronavirus (COVID-19)

You will not be legally required to self-isolate if you test positive for COVID-19. Stay at home if you can and avoid contact with other people as the advice is still relevant.

You will not have to take daily tests or be legally required to self-isolate following contact with someone who has tested positive for COVID-19.

This may differ throughout the UK so please check your local requirements.

What does self-isolating mean?

It is important to follow the advice for the whole period, even if you do not have any symptoms.

Do not leave your home for 5 days from when your symptoms started.

Stay away from vulnerable individuals, such as the elderly and those with underlying health conditions, as much as possible

Do

- stay at home
- separate yourself from other people – for example, try not to be in the same room as other people at the same time
- only allow people who live with you to stay
- stay in a well-ventilated room with a window that can be opened
- ask friends, family members or delivery services to carry out errands for you, such as getting groceries, medicines or other shopping
- make sure you tell delivery drivers to leave items outside for collection if you order online
- clean toilets and bathrooms regularly
- think about a bathroom rota if a separate bathroom is not available, with the isolated person using the facilities last, before thoroughly cleaning the bathroom themselves
- use separate towels from anyone else in the household
- wash crockery and utensils thoroughly with soap and water; dishwashers may be used to clean crockery and cutlery
- stay away from your pets – if unavoidable, wash your hands before and after contact

Don't

- do not invite visitors to your home or allow visitors to enter
- do not go to work, school or public areas
- do not use public transport like buses, trains, tubes or taxis

- do not share dishes, drinking glasses, cups, eating utensils, towels, bedding or other items with other people in your home

When you do not have to Self-Isolate

If someone you live with has symptoms of COVID-19, or has tested positive for COVID-19, you will not need to self-isolate if any of the following apply:

- you're fully vaccinated – this means 14 days have passed since your final dose of a COVID-19 vaccine given by the NHS
- you're under 18 years, 6 months old
- you're taking part or have taken part in a COVID-19 vaccine trial
- you're not able to get vaccinated for medical reasons

Double-jabbed individuals and under 18s who are identified as close contacts by NHS Test and Trace will be advised to take a PCR test as soon as possible to check if they have the virus and for variants of concern. People can order a PCR home test online or by calling 119, or going to a test site.

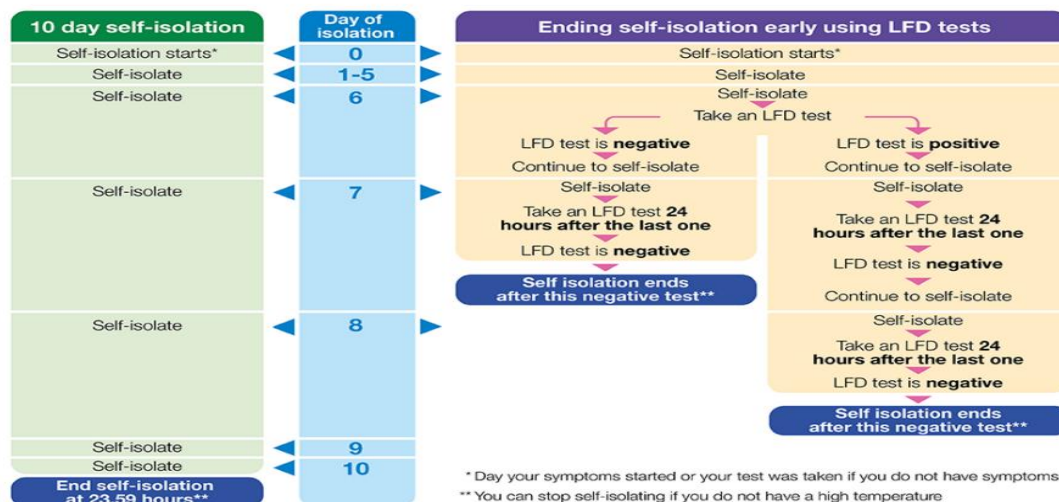

What to do about work or other responsibilities

During an outbreak, it is important to reduce the risk of further spread of the infection. This will require understanding and support from employers, family members and friends.

It can help to:

- talk to those around you, including your employer, about the importance of self-isolation to reduce the risk of spreading infection at work; if you are well, you may be able to work from home
- make plans with your family and friends on how to manage shopping, dropping children to schools and events
- ask people not to visit your home while you're self-isolating; if you need a healthcare or care visit at home during this time, tell them in advance that you are self-isolating so they can follow their local employer's guidance

Examples of when to end self-isolation if you have had COVID-19 symptoms or have received a positive COVID-19 test result

CATCH IT.

BIN IT.

KILL IT.

GOV.UK advice

Stay at home for 10 days if you have Coronavirus Symptoms:

- A high temperature
- A new, continuous cough
- A loss of, or change to, your sense of smell or taste

Do not go to the GP, pharmacy or hospital

Only call 111 if you feel you cannot cope with your symptoms at home or the conditions worsen or do not improve after 10 days.

How to avoid catching or spreading coronavirus

| Do | Don't |
|--|--|
| <p>Wash your hands with soap and water often (use hand sanitiser gel if not available) and always wash your hands when you arrive at home or work. Sneeze/cough into a tissue or your sleeve, bin the tissue immediately and wash your hands. Try to avoid contact with people who are unwell.</p> | <p>do not touch your eyes, nose or mouth if your hands are not freshly cleaned</p> |

Appendix F

The below is advisory and may be implemented based upon local or client requirements

All essential workers and members of their households who are showing symptoms of coronavirus will now be able to get tested.

This will mean individuals and people they live with will have the reassurance of knowing whether their symptoms are caused by coronavirus and can decide whether they are well enough to return to work.

Booking the test has been made simpler via a new online system. From today, employers can [register and refer self-isolating staff](#), and from tomorrow employees will be able to [book a test directly for themselves or members of their household](#) who are experiencing symptoms – a high temperature or new continuous cough.

Essential workers using the new portal can enter their details and will then receive a text or email the same day inviting them to either book an appointment at one of more than 30 drive-through testing sites across the country, or receive a home testing kit.

Test results from the drive-through sites will be sent out by text within 48 hours, and within 72 hours of collection of the home delivery tests.

The aim is that most people should not have to drive for more than 45 minutes to get to a regional testing site. However, additional testing methods are being rolled-out to support testing accessibility:

- A network of new mobile testing units is being rapidly established. These will travel the country to reach care homes, police stations, prisons and other sites where there is demand for testing. The units have been designed to clinical requirements by army engineers and can be easily set up in under 20 minutes.
- The new mobile units will work alongside the drive-through test sites, together sending thousands of patient samples to the network of Lighthouse Labs, to rapidly increase the number of tests completed each day.
- A delivery service for home testing kits has been designed with key industry partners, including Royal Mail and Amazon. The availability of home testing kits will initially be limited, but more will become available soon. This will ensure those not able to travel to a test center can still take the test, find out their results and return to work if possible.

Appendix G

Principles of cleaning after an individual with COVID-19 symptoms or confirmed positive following testing

Personal protective equipment (PPE)

The minimum PPE to be worn for cleaning an area after a person with symptoms of COVID-19, or confirmed COVID-19, has left the setting, is:

- disposable gloves;
- coveralls, and
- mask or face covering.

Wash hands with soap and water for 20 seconds after all PPE has been removed.

Cleaning and disinfection

All surfaces that the symptomatic person has come into contact with should be cleaned and disinfected, including frequently touched areas such as bathrooms, door handles, telephones and handrails.

Use disposable cloths or paper roll and disposable mop heads, to clean all hard surfaces.

Use one of the options below:

- a combined detergent disinfectant solution at a dilution of 1,000 parts per million available chlorine, or
- a household detergent followed by disinfection (1000 ppm available chlorine.). Follow manufacturer's instructions for dilution, application and contact times for all detergents and disinfectants, or

Ensure that you have the COSHH Assessment for the disinfectant that you use.

Any cloths and mop heads used must be disposed of and should be put into waste bags as outlined below.

Laundry

1. Wash items in accordance with the manufacturer's instructions. Use the warmest water setting and dry items completely. Dirty laundry that has been in contact with an unwell person can be washed with other people's items. To minimise the possibility of dispersing the virus through the air, do not shake dirty laundry prior to washing.
2. Clean and disinfect anything used for transporting laundry with your usual products, in line with the cleaning guidance above.

Waste

Personal waste from individuals with symptoms of COVID-19 and waste from cleaning of areas where they have been (including PPE, disposable cloths and used tissues):

1. Should be put in a plastic rubbish bag and tied when full
2. The plastic bag should then be placed in a second bin bag and tied
3. This should be put in a suitable and secure place and marked for storage until the individual's test results are known. It should not be placed in communal waste areas until negative test results are known, or the waste has been stored for at least 72 hours.
4. If the individual tests negative, this can be disposed of immediately with the normal waste.
5. If COVID-19 is confirmed this waste should be stored for at least 72 hours before disposal with normal waste.
